

Individual Status Report 5

Goals from last week:

- Meet more frequently with team to ensure a good deployment of our MVP.
- Complete the user card login and register of users with the updated authentication methods.
- Update backlog as needed.
- Help team with creating test cases for their user cards.
- Finalize our MVP main branch for release to TAs/instructor.

Progress from this week:

What I did:

I was able to update the backlog in regards to my available time.

What I learned:

I learned how to use authenticator calls for user accounts on our flask app.

I learned how to store user account data more securely in the database.

Where I had trouble:

Time management, my father is very sick and doesn't have long to live. I have been taking care of him almost entirely throughout every day.

Where I am stuck:

I have to help my dad with food and moving throughout the apartment. He was already physically disabled and now was diagnosed with multiple cancers at stage 3 and 4.

Plans and goals for following week:

- Update my team members with my availability.
- Send an email to the professor about my current situation at home.
- Reach out to family members for help with care for my father.
- Try to find time for helping group members with this project.
